

# CLINALYTIX

Artificial Intelligence for Prediction and Prevention

## FOCUS

Clinalytix serves as decision support for doctors, nurses, and intervention teams!

### The Artificial Intelligence and Business Intelligence pyramid

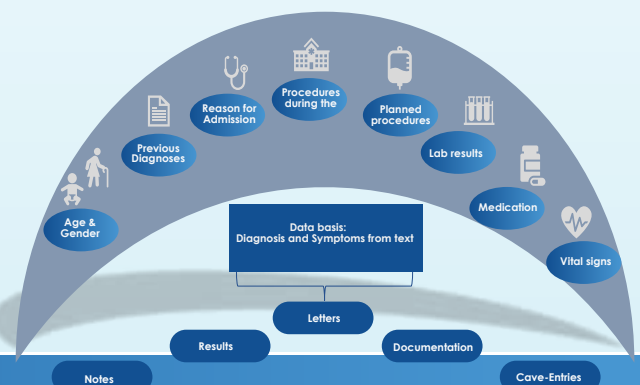

Business Intelligence	Advance Analytics & AI			
Stand Alone BI	Advance Analytics		AI	
 Dedalus clinalytix Medical AI	 clinalytix Investigative	 clinalytix Research AI	 clinalytix Medical AI	 clinalytix Operational AI
Analytics capabilities for Dedalus products and regions  <b>Product approach:</b> standard dashboards (verticles)	<b>Analyze medical data</b> in an exploratory way	<b>Perform research</b> on medical data	<b>Prediction</b> of unwanted events (delirium, sepsis, acute kidney injury)	<b>AI that supports operational processes</b> and planning optimization
<b>Project approach:</b> customer specific dashboard	 <b>Technical framework</b> for Dedalus AI/ML/NLP and integration of partner AI (eg. Imagine AI)			

## Artificial Intelligence

- Use of AI for the early identification of unwanted events during treatment process
- Models for delirium and sepsis risk prediction
- Registered as a Class I medical device

## Training of the Model Data Basis

# THERE'S A BETTER WAY TO PREDICT UNDESIRE

## Clinalytix Investigative

: is a Big Data capable investigative intelligence solution which provides evidence-based insights, on both populations and individuals, that can be used to deliver improved care.

### Product Capabilities

- ✓ Create and share dashboards and reports.
- ✓ Visualize both aggregated and detailed information.
- ✓ Monitor and manage Key Performance Indicators (KPIs).
- ✓ Investigate and discover patient cohorts based on a mix of inclusion and exclusion criteria.
- ✓ Clinical tagging to simplify searching and filtering operations.
- ✓ Disease staging to classify conditions based on risk or severity levels
- ✓ Healthcare Standards: HL7 FHIR (Fast Healthcare Interoperability Resources), OMOP (Observational Medical Outcomes Partnership) codes

## Clinalytix Medical AI

### Product Supports Predictions

: supports the treating physician in detecting patients at risk of a set of clinical complications, to allow prompt prevention and/or early treatment, therefore avoiding these complications and their healthcare-associated costs.

- ✓ Delirium,
- ✓ Sepsis,
- ✓ Acute Kidney Injury (AKI)

## Clinalytix Research

: research aims to guide the research users in conducting a complete research analysis by using well-documented and explanatory templates that can serve as a reference for conducting custom clinical research. The main goal of the product is to systematize the execution of the analyses with a step-by-step approach.

### Product Capabilities

- ✓ Survival Analysis: Statistical analysis of the time from when the target population enters the cohort until the outcome event of interest occurs.
- ✓ Cluster analysis: Grouping of patients with similar characteristics.
- ✓ Identification of risk factors: Identification of risk factors related to the outcome of interest in a period.
- ✓ Persistence and adherence: Estimation of the persistence and adherence of the drug of a population group
- ✓ Patient trajectories: Describes the sequence of clinical events a patient goes through over a period.
- ✓ Medication change analysis: Describes the sequence of treatment a patient received over a period.
