CONTEXT

PATIENT ENROLMENT ISSUES

Clinical Trials are a hugely important and mandatory step in our ever continuous chase to create new effective and innovative treatments and therapies for patients.

However, as an industry we continue to face huge patient enrolment issues with **50% of clinical trials** under-enrolling patients, **10% not recruiting a single patient** and in the UK for example, only **2% of cancer patients** are offered to be part of a clinical trial, let alone enrolled, considering 1 in 2 people get cancer in their life time.

TRIALS4CARE SECURE RESEARCH ENVIRONMENT

Due to Dedalus' large network of hospitals and 460+M patient records, we are in a prime position to tackle this issue and be the bridge between these patients and the life sciences industry providing patients with new innovative treatments and therapies as well as providing the hospitals that these patients belong to with much needed revenue.

We achieve this through the full anonymisation of the patient data held in the EHRs within the Healthcare Providers' infrastructure and sharing only fully anonymised statistical metadata in a secure research environment.

Within this secure environment, life sciences organisations can perform feasibility studies, retrospective digital studies and can send an expression of interest to the hospitals to recruit the captured cohort of patients captured in their inclusion and exclusion criteria.

CAPABILITIES

WHAT IS T4C?

T4C is a data-as-a-service gateway solution Secure research network over Real World Data (RWD)

VALUES

BENEFITS TO YOU AND YOUR PATIENTS

Providing your patients with **new innovative treatments and therapies** before others

Ability to **analyze** internal data more **efficiently** for use with your own research

Extend your network

Build better **research services**

Attract more external clinical **research /funding**

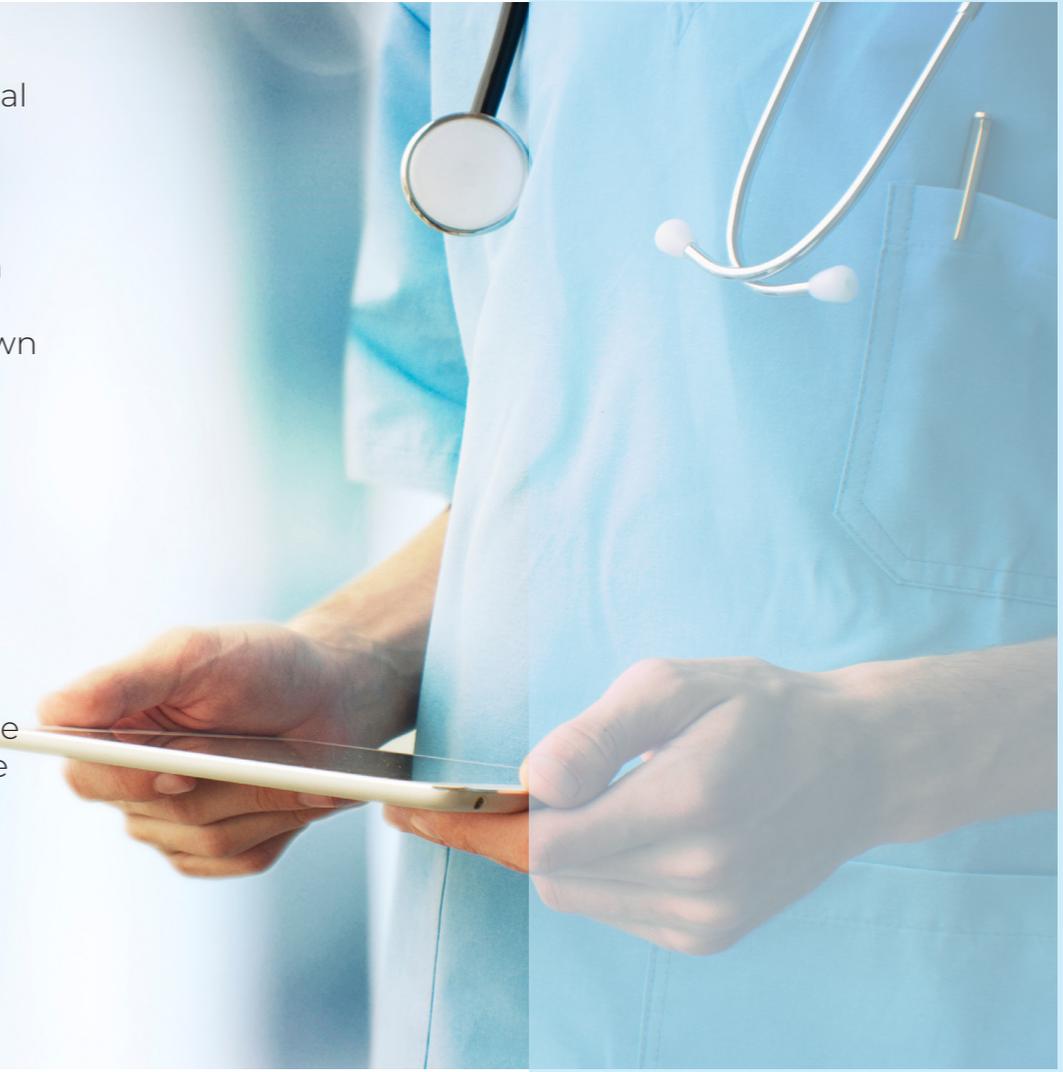

Ability to tap into the data of other hospitals, on the network, for use in your own **investigator research**

Build on your **existing investment & Target operating Model (TOM)**

Unlike existing solutions, T4C's sophisticated software ensures the **authenticity and accuracy** of the data being used

ABOUT DEDALUS

Dedalus is the leading healthcare and diagnostic software provider in Europe and one of the largest in the world. With its innovative framework of comprehensive and process-oriented solutions, Dedalus enables a revolutionary digital transformation of country-wide Healthcare Systems fully supporting the patient digital journey. Dedalus serves more than 6,100 private and public hospitals across 40 countries, through more than 6,500 highly specialised resources, of which 2,000 are dedicated to R&D activities. We aim to help caregivers and healthcare professionals deliver better care to the communities they serve and for this reason we are very proud of doing a special job, working with healthcare organisations to improve healthcare outcomes for patients.
