

Dedalus joins openEHR International

Milan, 2022 May 26th – **Dedalus Group ("Dedalus")**, the leading clinical and diagnostic software solutions provider in Europe, joins the openEHR International, executing its strategy of openness.

Dedalus creates solutions to **support the whole continuum of care**, adopting multiple international standards to accelerate incremental innovation and to rapidly **deliver value to patients, healthcare professionals, healthcare providers and institutions**, and to exploit the power of data securely.

Openness and Co-existence are key in this rapidly evolving healthcare eco-system. **Dedalus embraces all relevant digital health standards** and international communities operating in healthcare such as HL7, IHE, FHIR and **today joins openEHR International**.

Dedalus believes that **international standards and models will co-exist** as they solve different clinical challenges where the key focus is directed towards empowering clinical efficiency and effectiveness, at all times.

"Healthcare is at an inflection point where the speed of responding to evolving care delivery models requires easier data capture, data persistence, data sharing and secondary use of data" comments Michael Dahlweid, MD PhD Chief Product Officer.

Femi Ladega, Chief Digital Officer continues *"At the heart of Dedalus' platform strategy there is the principle of openness and a set of principles including open data, open process, open terminology, open deployment, open apis, open apps, open UI/UX and open analytics, wrapped around international standards, privacy and confidentiality, enabling the delivery of the next generation of care in an open, secure and interoperable eco-system"*.

Dedalus is **actively working within the healthcare landscape** of multiple actors, vendors and partner organisations: in this context **the decision to join openEHR International is further confirming the Group's strategy** to advance semantic and process interoperability, in order **to accelerate the next generation of care delivery**.

ABOUT DEDALUS

Dedalus Group is the leading healthcare and diagnostic software provider in Europe, supporting the digital transformation of 6300 Healthcare Organisations and 5700 Labs and Diagnostic centres worldwide, processing its solutions for more than 540 million citizens worldwide. Dedalus supports the whole continuum of care, offering open standards-based solutions serving each actor of the Healthcare Ecosystem to provide better care in a healthier planet. Life Flows through our software.

ABOUT openEHR INTERNATIONAL

OpenEHR is a standards framework for e-health consisting of open technical specifications and clinical models that define an open EHR platform for healthcare and medical research. The principal architectural concepts include the patient-centric health record, clinical guidelines, and decision support.
