A DIAGNOSTIC, MULTIDISCIPLINARY VIEWER FOR THE WHOLE INSTITUTION

Enterprise imaging is getting more important for healthcare institutions to allocate resources, to help cross-departmental collaboration and to guarantee an improvement in the daily workflow.

We believe in the benefits that an enterprise imaging approach can offer you and your patients by facilitating faster diagnosis.

That's why we worked on an easy to access web-based, diagnostic viewing system for accessing images and documents at any place within your hospitals.

DeepUnity Clinical Viewer* plays a vital role in the enterprise imaging approach, serving as a medical device that hospitals utilize to streamline workflows, save time and resources.

**Market availability depends on the country. Please get in contact with us or your local Dedalus sales contact*

FACING CHALLENGES

Usually there are different solutions for accessing images and patient related documents in each hospital department.

Challenges are:

Different solutions

Physicians need to use various applications for different medical specialties to get the overall view of the patient

Stationary Access

Specialized workstations tie medical staff down to a locality and take away freedom of workplace choice

Accessing archives & modalities

Data stored in divergent DeepUnity archives often cannot be accessed at once and viewed together at the same time; as it is similar with modalities

BRINGING TO LIGHT: A WEB-BASED UNIVERSAL VIEWING SYSTEM

DeepUnity Clinical Viewer is designed to ensure unified access to all medical data.

DeepUnity Clinical Viewer offers:

One Viewing solution

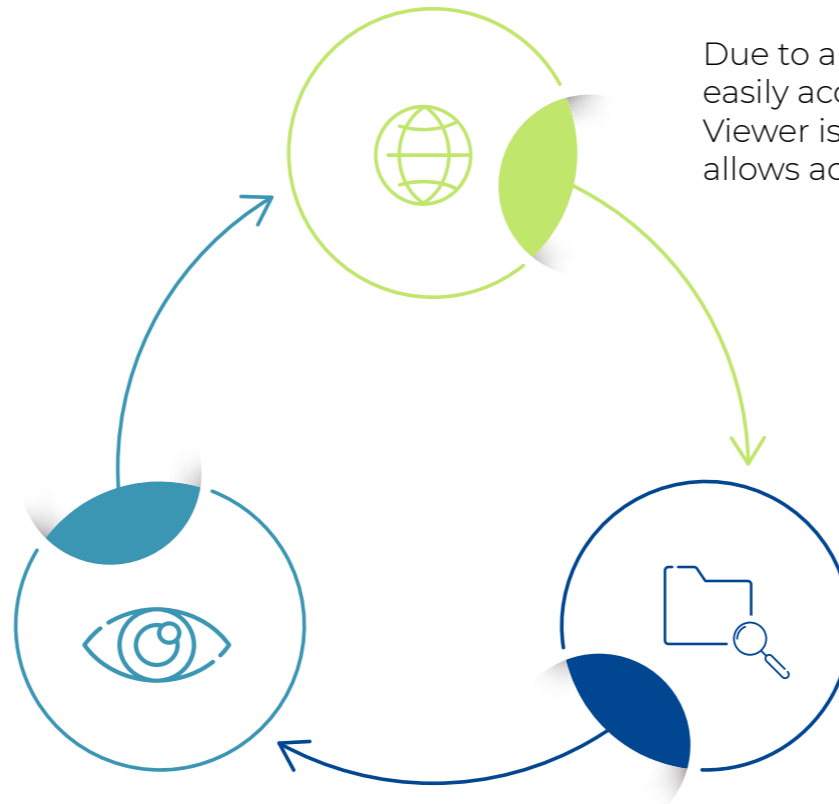

Bringing examinations, medical documents and images from different specialties together in a universal solution

Remote work

Due to a web-based interface healthcare professionals can easily access images and documents remotely. DeepUnity Viewer is designed as a "location agnostic" application that allows access to medical data from anywhere

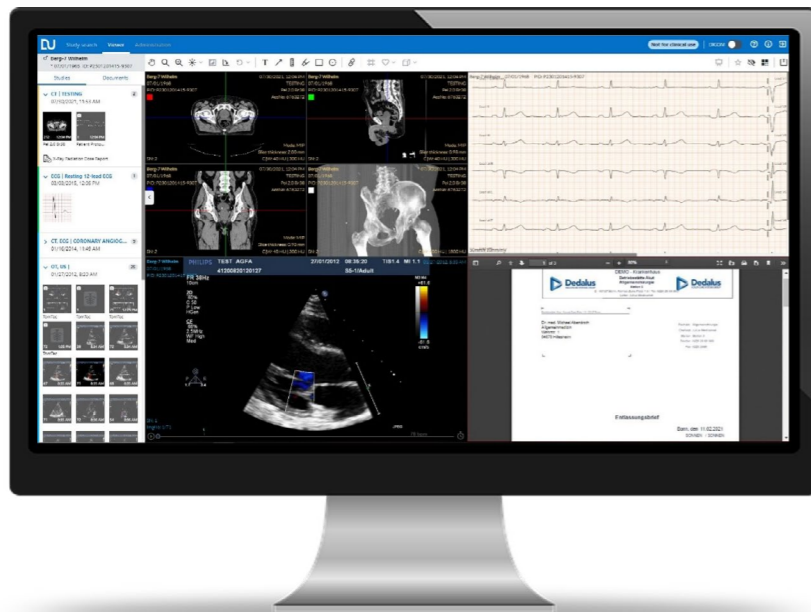

Always available data

One application offering uniform access to patient data from different DeepUnity archives and modalities

SOLUTION

TOGETHER WE BUILD YOUR ENTERPRISE CONTENT STRATEGY

Cutting edge technology

DeepUnity Viewer is built on a state-of-the-art platform technology that offers automated deployment processes and high availability of DeepUnity applications

Clinical-wide access

Accessing medical content via web-application – secure and fast.

All in one application

Images and documents directly accessible

Export or printouts

Direct export or printouts of the screen as JPG - Printing out annotated images

Annotation of images

Insert annotations directly into the image

Multidisciplinary approach

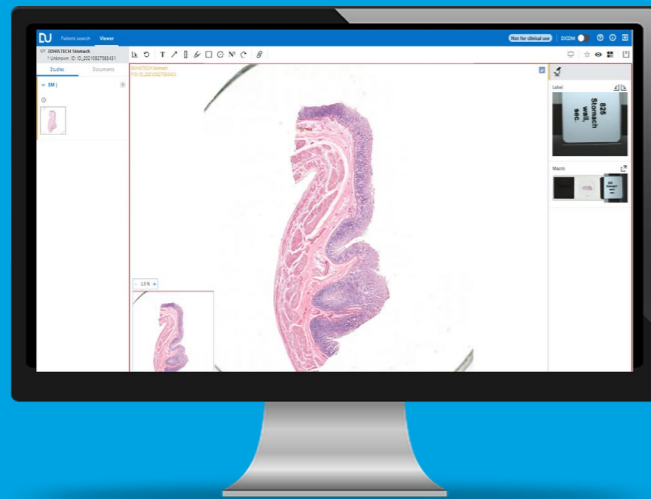

Images from different specialities

ENHANCED CAPABILITIES FOR RADIOLOGY

- Multi-modality support
 - Linking of multiple series for easy navigation
 - Multiplanar reconstruction:
 - Axial, sagittal and coronal 2D views
 - 3D volume rendering
 - Linked navigation of multiple MPRs within and across studies
- Support of key images and presentation states
 - Multiple measurement and annotation tools
 - Cine mode

LET'S DISCOVER THE POSSIBILITIES OF THE PATHOLOGY EXTENSION

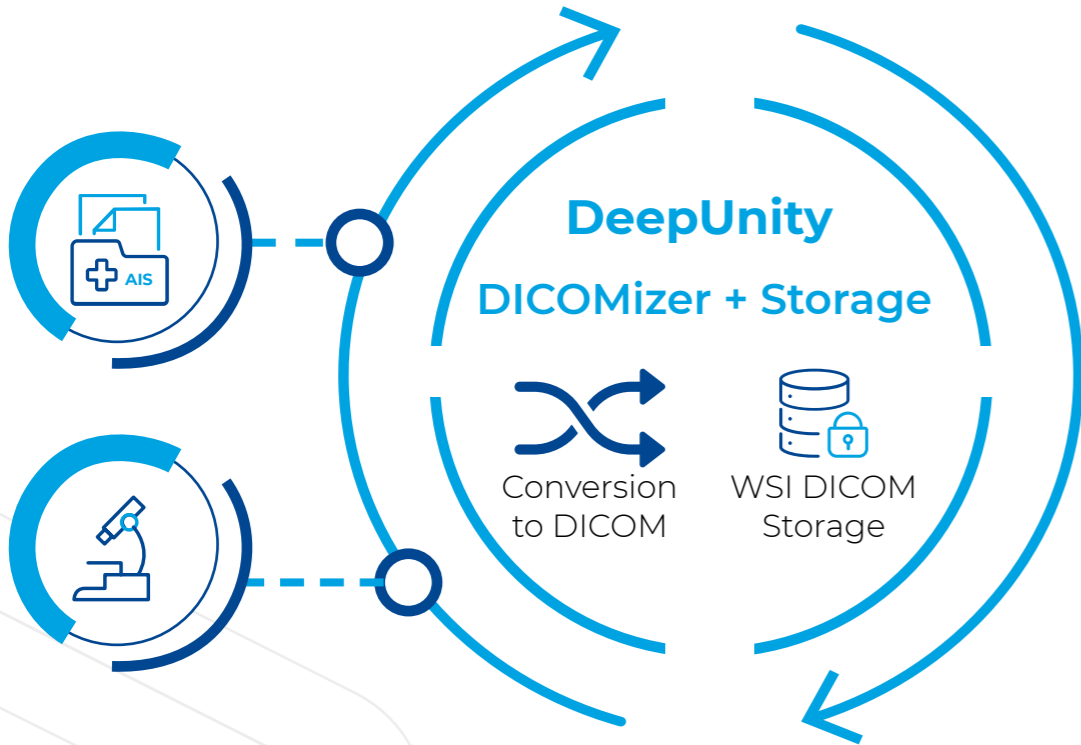

- Annotation tools & counting tool
- Synchronization of two slides
- DICOMization of slides

- Patient context:
Populate images with patient information to always guarantee patient context

LET'S DISCOVER THE POSSIBILITIES OF THE PATHOLOGY EXTENSION

Pathology

Archiving Highlights

- Fast, robust and scalable archiving
- Open standard communication (FHIR/HL7) and multi-tiered storage
- Automatically DICOMization of slides

Can be used with the majority of scanners:
Staying independent from WSI Scanners

ENHANCED CAPABILITIES FOR CARDIOLOGY

Support of 12-lead, 15-lead and 18-lead ECGs

- Presentation of all leads in one view
- Multiple layouts
- Supports majority of ECG vendors
- Caliper tool to measure ECG intervals

Display of up to four different ECGs for easy comparison

Cine functionality to animate blood flow and other cardiovascular processes in real time

VALUE

UNIVERSAL VIEWING

IT Infrastructure

Accessing archives due to standard DICOM communication with FHIR

Secure authentication

Image & Document Sharing Possibilities

Fast sharing of images and results

Improvement of institutional-wide collaboration

Access anywhere at anytime within your institution

Remote Work

Higher comfort through the possibility to work from home

Secure access to medical content

Better User Experience

Images from multiple medical specialities accessible in a single viewer

Pathology Workflow Improvement

Ability to populate images with patient information to always guarantee patient context

Unified Access

Supports a multidisciplinary approach. Special tools for Radiology, Pathology and Cardiology

Images and documents accessible from one system

Lengenda

Lower costs

Smoother workflow

Higher Security

Time saving

YOUR BENEFITS

FROM A BUSINESS PERSPECTIVE

- **Partner approach:** We help you in setting up an enterprise imaging strategy
- **Improve** institutional-wide **collaboration** through fast web-based image and document accessing
- Only **one system** needed for a multidisciplinary approach
- State-of-the-art platform technology to **reduce IT maintenance** and **higher application availability**

FROM AN IT PERSPECTIVE

- Zero footprint **web-based** application
- **Seamless interoperability** with your IT landscape
- Images from multiple medical disciplines in one single viewer
- **Scalable** and multi-tiered **archiving solutions** complement the offer
- Benefit from DeepUnity Platform: Automatic deployments and parallel operation of multiple software instances enable **fail-safe** and **simplified deployment** of new releases, **saving time** and **costs**

FROM A USER PERSPECTIVE

- **Enable** the possibility for **remote work**
- **Web-access** – everywhere in your institution, any time
- **Quick access** of **medical content** within your institution
- **Less time** for accessing patient related medical data
- **Measuring Tools** included

Dedalus

Life flows through our software

ABOUT DEDALUS

Dedalus Group is the leading healthcare and diagnostic software provider in Europe, supporting the digital transformation of 6300 hospitals and 5700 Laboratories worldwide, processing its solutions for more than 540 millions of population worldwide. Dedalus supports the whole continuum of care, offering open standards-based solutions serving each actor of the Healthcare Ecosystem to provide better care in a healthier planet.

Life flows through our software.
