# DeepUnity Discovery: new PACS-centered reporting

BRINGING MORE EFFICIENCY, FLEXIBILITY, AND EASINESS IN REPORTING SOLUTION.

Approaching new challenges for a better care delivery model:
Reporting phase is one of the most crucial steps in radiology, cardiology, and nuclear medicine area; in fact, diagnostic reports create a direct connection with referring physicians, healthcare professionals, and patients directly impacting the patient care outcomes. Today's systems should face the challenges are influencing the reporting phase.

Reporting in Imaging IT is continously evolving

Time
Imaging data volumes continue to rise, and complexity of cases increases there if often less time

Harmonization
A common flow of communication between primary care centers and hospital care is essential to achieve higher results in care delivery

Quality
An increasing focus on providing real added value via effective communication through reports decicated to physicians and patients too

Integrated solutions
Organizations are looking for solutions that can be easily integrated in their existing systems

Productivity
Standardize procedures and reporting workflow are clear efficiency advantages each organization is looking for

DeepUnity Discovery is our latest PACS centered reporting solution, designed to helps radiologists, cardiologists, and nuclear medicine physicians in creating diagnostic reports in a more efficient, flexible, and easier way. Our reporting solution improves the specialized work of reporting healthcare professionals by:

Optimizing efficiency

For the first time ever in the DeepUnity environment, healthcare professionals can analyze studies and create **dedicated reporting** directly within DeepUnity Diagnost (PACS) with no need to switch to other systems. DeepUnity Discovery enables **downtime reduction** with fewer interface changes and clicks, and with fully integrated tools.

Increasing flexibility

Users will have the opportunity to **customize report templates** to better fit with their needs. They will also have the ability to create one report for multiple different types of examinations. Radiologists will be empowered to create **cleaner reports** or **edit** those have already been finalized.

Enhancing easiness

Our experts have designed an **optimized user interface** and **experience** that can be operated intuitively to reduce human errors and deliver consistent reporting outcomes to the right healthcare professionals. In addition, healthcare professionals can benefit from **smoother workflow procedures** with one access point for all the information (previous patient reports, medical images, etc.).

DeepUnity Discovery is a **fully integrable** solution in the DeepUnity suite to suit your **cost-conscious** approach and guarantee the **reliability** of a well-known suite in the medical imaging IT market, simultaneously reducing the number of vendor contracts and interventions. DeepUnity discovery is an evolution in diagnostic imaging that paves the way for a more efficient and qualitatively superior reporting.

The workspace is designed to optimize workflows, processing your diagnostic reports in an easier and faster way

All reporting tasks and medical information such as, urgency level, status, patient data, always at your fingertips, in only one access point to reduce complexity
