Care pathways
module the care management
platform for the Managing of
integrated health plans for
chronic patients

FROM CARE TO CARING

THE CONTEXT

The creation of a care pathway for a **“frail” Patient**, with **various chronic diseases** and with **social problems**, must guarantee a level of care appropriate to his real needs.

THE NEEDS

The prerequisite to create an efficient and effective system is the **integration of Competences**, which can and must be supported by advanced and flexible ICT tools, able to overcome the limits of the traditional approach.

THE CHALLENGES

A real change of perspective is therefore necessary for all healthcare professionals, which requires overcoming the limits imposed by an approach that has proven to be inadequate to meet new needs and **face the challenges of the future.**

THE SOLUTION

A computerized module that is an innovative and flexible solution to the growing need to manage patient life and care pathways – through a customized interdisciplinary approach that places **the person at the center of the system**, overcoming the traditional path approach focused on the single disease.

CARE PATHWAYS THE MODULE

The Care Management platform makes it possible to address the problem of chronicity and frailty through **an innovative “holistic” approach that places the patient at the center of the system**, integrating Hospital and Territory through a **multi-professional team.**

Thanks to the platform it is possible to **create real “Health Pathways”** with the ability to overcome the limits of the more traditional approach (diagnostic and therapeutic care pathways “PDTA”) focused on the disease.

The strengths of the **CARE PATHWAYS**

- Interdisciplinary management of “frail” and chronic multi-disease patients
- Greater appropriateness and integration of different care settings
- Optimization of pathways and better patient enrolment
- Improved communication between different professionals and with the patient
- Reduction of risks arising from the use of unsafe tools
- Strategic planning tools, monitoring of appropriateness and costs
- Cost reduction

Care management platform for proactive process monitoring

A complete solution to create the healthcare of the future

Mobile solutions to simplify the interaction between professionals and patients

Interoperability to dialogue with existing Information systems of the affiliated facilities.

Multidisciplinary Team for a holistic patient-centered approach.

Patient empowerment for active involvement through Innovative smartphone apps

Management decision Support system for strategic planning, cost and outcome Analysis.
